

Files assignment /20 marks (19+1 comments)

1. The "atp.text" file has the following format

<position>,<firstName>,<lastName>,<age>,<points>

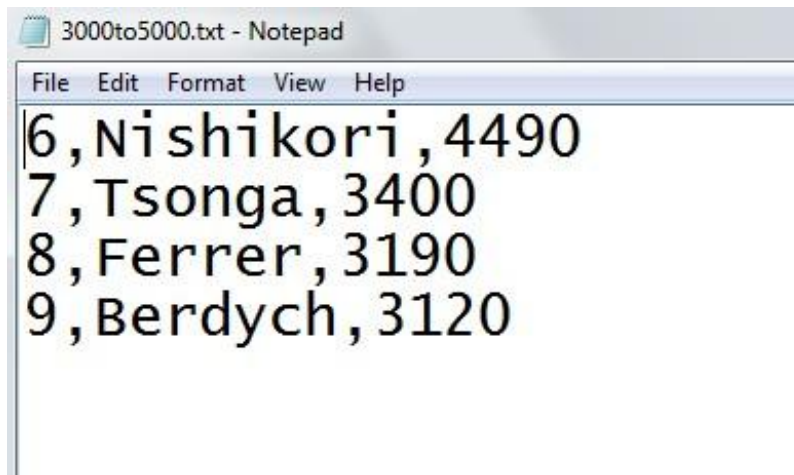

Write a program that will ask the user to enter the lower points limit and the upper points limit and based on those 2 numbers it will create a txt file (comma separated) that includes the players ranking, his last name and his points.

Output how many players are in that range. The name of the file should be "MinPointstoMaxPoints.txt" e.g.

3000to5000.txt

```
>>>
Enter the points FROM: 3000
Enter the points TO: 5000
-----
4 players total
>>> |
```

The text file should look like this:

(5 marks)

2. Write a program that will read from "stocks.txt" and "myportfolio.txt".

stocks is a file that has a list of stocks in it. Each stock has:

<name> <code> <value>

Each of these are separated by tabs. The value is the value of one share of the stock.

myportfolio contains a list of my personal stock profile, it has a list of the stocks that I own in the form of:

<code> <num>

Where num is the number of shares of the stock I own.

Make a program that reads from both files and displays a nice table that shows the names, and values of each stock I own, and the total value of the portfolio.

(7 marks)

3. The text file **lebron.txt** contains numbers separated by commas. Each of the numbers represents the number of points scored by LeBron James in each quarter. An NBA game has 4 quarters. Write a program that will display the number of points LeBron James scored in each game. The program should work for any text file. If you use **lebron.txt** that is posted on Edsby, you should get the following output:

Sample output:	File Edit Format View Help
Game 1: 30	11,0,13,6,4,7
Game 2: 27	11,5,0,9,11
Game 3: 31	11,7,12
Game 4: 35	10,6,4,4,7,11,6,14
Game 5: 26	
Game 6: 20	

this means in the
last game he played
only 2 quarters

(total 20 points)

(7 marks)
